PROFESSIONAL SUMMARY

Aspiring SOC Analyst with hands-on experience in vulnerability assessment, SIEM deployment, and network traffic analysis. Completed 4+ hands-on cybersecurity projects and 15+ TryHackMe labs covering reconnaissance, exploitation, and log analysis. Cisco Networking Academy and Google Cybersecurity certified, with a strong foundation in TCP/IP, threat detection, and automated incident response fundamentals.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, HTML, Bash (Shell Scripting)
- **Cybersecurity:** Network Security, TCP/IP, DNS, HTTP/HTTPS, SOC Fundamentals, Vulnerability Assessment, Network Reconnaissance, Packet Analysis, Log Correlation, Threat Detection (TTPs)
- **Tools & Platforms:** Wazuh SIEM, Zeek IDS, Splunk (SIEM Basics), Kali Linux, Wireshark, Nmap, Metasploit, VirtualBox, Git/GitHub
- **Operating Systems:** Windows, Linux (Ubuntu & Kali Linux)
- **Soft Skills:** Analytical Thinking, Problem Solving, Communication, Teamwork, Time Management, Quick Learner

TECHNICAL PROJECTS

Wazuh SIEM + Zeek IDS + SOAR Automation

- Deployed and configured Wazuh SIEM integrated with Zeek IDS to monitor network traffic and detect security events in real time.
- Built automated SOAR playbooks to auto-triage and respond to common alert types, reducing manual analyst response time by an estimated 30%.
- Correlated logs across multiple endpoints and network sensors to identify multi-stage attack patterns and minimize false positives.

Honeypot + Threat Detection with Wazuh

- Deployed an open-source honeypot in an isolated environment to safely attract, log, and capture live attacker activity.
- Integrated honeypot logs with Wazuh SIEM to generate real-time SOC alerts on malicious behaviors and brute-force attempts.
- Analyzed captured attack patterns to document attacker tactics, techniques, and procedures (TTPs) mapping against the MITRE ATT&CK framework.

Vulnerability Assessment & Remediation (VA&R) - Metasploitable2

- Performed comprehensive vulnerability assessment on Metasploitable2 using Nmap and Metasploit, identifying 10+ exploitable CVEs across services.
- Conducted CVSS score analysis to prioritize vulnerabilities by severity and documented detailed remediation recommendations for each finding.
- Carried out controlled exploitation in an isolated lab environment to validate identified vulnerabilities and verify patch requirements.

Nmap Network Scanning & Reconnaissance

- Scanned 20+ hosts to perform host discovery and TCP port scanning, successfully identifying open ports and active services.
- Reduced manual reconnaissance effort by mapping the network attack surface systematically to support downstream vulnerability analysis.

Wireshark Network Traffic Analysis

- Captured and analyzed 100+ packets of TCP/IP, DNS, and HTTP traffic to detect anomalous communication patterns.
- Applied custom display filters to isolate, inspect, and trace source-destination IP flows for suspicious or unexpected traffic.

Linux Shell Scripting & Automation

- Built 4 Bash automation tools: an IP address finder, a file integrity checker, and a system health checker for CPU, RAM, and disk usage.
- Automated routine Linux administration and monitoring tasks, significantly reducing manual endpoint auditing effort.

EDUCATION

Master of Computer Applications (MCA) — *Distance Mode*

2026 - Pursuing

Indira Gandhi National Open University (IGNOU)

Bachelor of Computer Applications (BCA)

2023 - 2026

Shikshapeeth College of Management and Technology / Maharishi Dayanand University | **CGPA: 6.3**

Class XII (Senior Secondary)

CBSE Board

Percentage: 86%

CERTIFICATIONS & LABS

- **Google Cybersecurity Professional Certificate**
- **Cisco Networking Academy:** Introduction to Cybersecurity
- **Cisco Networking Academy:** Networking Basics
- **Cisco Networking Academy:** Introduction to Packet Tracer
- **TryHackMe Portfolio:** Completed 15+ beginner cybersecurity rooms covering Linux, networking, reconnaissance, and web security.

LANGUAGES

- English (Professional), Hindi (Native)
